One-Handed Recline

The Salia 125 child seat has four recline positions. The resting position is very flat and offers maximum comfort. Recline can be adjusted with just one hand.

Air Ventilation System

Openings in the outer shell and mesh inserts in the seat cover ensure continuous airflow, making long sitting periods particularly comfortable.

Patented HERO Safety System

The patented HERO system combines shoulder pads, straps and headrest into one unit, preventing slipping or twisting of the harness and allowing quick, secure strapping.

Advanced Side Protection (ASP)

The integrated protectors can be quickly folded out on the door side. In the event of a side impact, energy is transferred into the shell, significantly reducing the forces acting on the child. Together with the seat structure, the ASP provides double protection.

One-Handed Recline

The Salia 125 child seat has four recline positions. The resting position is very flat and offers maximum comfort. Recline can be adjusted with just one hand.

Air Ventilation System

Openings in the outer shell and mesh inserts in the seat cover ensure continuous airflow, making long sitting periods particularly comfortable.

Patented HERO Safety System

The patented HERO system combines shoulder pads, straps and headrest into one unit, preventing slipping or twisting of the harness and allowing quick, secure strapping.

Advanced Side Protection (ASP)

The integrated protectors can be quickly folded out on the door side. In the event of a side impact, energy is transferred into the shell, significantly reducing the forces acting on the child. Together with the seat structure, the ASP provides double protection.
